"Effectiveness of structured teaching programme on knowledge regarding ABG analysis and its interpretation among B.Sc nursing students."

### Mrs. Deepa P D

(Assistant professor, Department of Medical surgical Nursing, Bombay Hospital College of Nursing, Indore, M.P, India)

#### **ABSTRACT**

**Back ground**: Arterial blood gas (ABG) analysis is a blood test that measures the levels of many different gases in the oxygen rich blood. Some of these levels are measured directly; while others are calculated from the measurements of other gases. By measuring the gases in arterial blood, a physician can determine its contents before the blood nourishes the body. Arterial blood gas analysis is a frequently used tool for assessing blood oxygenation. Physicians, registered nurses and respiratory therapies are responsible for the accurate interpretation and management of acutely and critically ill patients. Since the nurses and student nurses in critical care units are more involved in ABG interpretation and as well as caring patients on ventilation, the nurses and student nurses have more knowledge. If they are able to interpret them in a correct way, it can prevent complications, avoid errors and help in the progress of Patients condition. Aim: Assess the effectiveness of the training program of ABG analysis on increasing knowledge of Bsc Nursing students. **Objectives**:1.To assess the knowledge of BSc Nursing students of both experimental and control group before the implication of Structured Teaching Programme. 2. To assess the effectiveness of Structured Teaching Programme on knowledge regarding ABG analysis and its interpretation among B.Sc nursing students of experimental group. 3. To compare the post knowledge score among experimental and control group of B.Sc Nursing students .Methodology: This study was based on descriptive approach the data were analyzed on 40 sample and by using various statistical tests i.e percentage, mean, median, and standard deviation, t test. Results: The Structured

Volume 05 Issue 21 October 2018

Teaching Programme regarding ABG analysis is very effective for improving the knowledge

level of student Nurses, and it should be practiced in the clinical areas.

INTRODUCTION

An arterial blood gas analysis (ABG) is a test that measures the Oxygen tension, Carbon

dioxide tension, acidity, Oxyhemoglobin saturation, and Bicarbonate concentration in arterial

blood. Such information is vital when caring for patients with critical illness, respiratory, or

metabolic diseases.

Arterial blood gas studies are concerned with the exchange of gases between the lungs

and blood and between blood and tissues. An ABG can be safely and easily obtained and

furnishes rapid and accurate information on how the lungs and kidneys are working. It is the

single most useful laboratory test in patients with the respiratory and metabolic disorders.

Nurses play an important role in early detection of high-risk clients with a base drug

therapy, oxygen therapy ad mechanical ventilation when it is indicated in extreme

circumstances in which therapeutic compensation is required. The nurse should be

knowledgeable about potential risks of these therapies and able to carefully monitor the

administration rates and therapeutic responses. Normal pH of blood is 7.35-7.45. PaO<sub>2</sub> has a

normal range of 70-100 mm Hg and PaCo<sub>2</sub> is 35-45mm Hg; SaO<sub>2</sub> is 93-98%. HCO<sub>3</sub> has a

normal value of 22-26meq/l.

October 2018

**NEED FOR THE STUDY** 

Knowledge on ABG analysis is important for nurses in treating critically ill patients

because underlying acid base disturbances are inevitable in these patients. It plays a significant

role in documenting and monitoring respiratory failure and to detect the presence and severity

of Hypoxemia and Hypercapnea.

A study was conducted among student nurses to find the concept of acid base balance. It

presented a step by step approach to Arterial Blood Gas analysis along with the components of

ABG (pH, PaCo<sub>2</sub>, and HCO<sub>3</sub>), metabolic and respiratory abnormalities (Acidosis and Alkalosis)

in relation to causes, signs and symptoms, concept and degree of compensation required, the

five steps of ABG analysis and practice problems. The study concluded that the student nurses

can analyse the ABG values confidently in order to make a wise choice regarding patient care.

Despite marked efforts, experts suggest that patient safely has not substantially

improved. Efforts to improve safety has been hindered in part by the difficulty in recognizing

and reporting events that routinely occur in complex and the lack of expertise in critical care

and patient safety. Because these failures are more challenging to identify, they will most

certainly require more diverse and innovative reporting method.

STATEMENT OF THE PROBLEM

A Quasi experimental study to assess the effectiveness of Structured Teaching

Programme on knowledge regarding ABG analysis and its interpretation among B.Sc Nursing

Students of Bombay Hospital College of Nursing, Indore.

Available at https://pen2print.org/index.php/ijr/

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21

October 2018

**OBJECTIVES OF THE STUDY** 

1.To assess the knowledge of BSc Nursing students of both experimental and control group

before the implication of Structured Teaching Programme.

2. To assess the effectiveness of Structured Teaching Programme on knowledge regarding

ABG analysis and its interpretation among B.Sc nursing students of experimental group.

3. To compare the post knowledge score among experimental and control group of BSc

nursing students.

ASSUMPTION

The study assumes that the Structured Teaching Programme may be an effective method

to improve the knowledge regarding ABG analysis and its interpretation among B.Sc Nursing

students of Bombay Hospital College of Nursing, Indore.

**HYPOTHESES** 

H1: There will be a significant difference in the pre test and post-test knowledge score after the

administration of Structured Teaching Programme in the experimental group.

H2: There will be significant difference in the post test knowledge score among experimental

and control group of BSc Nursing students.

Volume 05 Issue 21 October 2018

**OPERATIONAL DEFINITIONS** 

Quasi-experimental study: In this study, Quasi experimental refers to the manipulation of

knowledge through Structured Teaching Programme (independent variables) to observe the

effect on knowledge of B.Sc Nursing students.

Effectiveness: In this study, effectiveness refers to the degree to which Structured Teaching

Programme achieve the desired effect in improving the knowledge regarding ABG analysis and

its interpretation among B.Sc Nursing students.

ABG analysis: In this study, ABG analysis refers to a test done by puncturing an artery and

drawing a small amount of blood, in order to measure the amount of oxygen, carbon dioxide

and acidity (pH) of the blood

**Interpretation**: In this study, interpretation refers to an act of explaining the results of ABG

analysis.

**Bsc Nursing students**: students of Bsc Nursing 2<sup>nd</sup> year and 3<sup>rd</sup> year of Bombay Hospital

College of Nursing Indore.

**DELIMITATION** 

This study is delimited to 40 B.Sc Nursing students of Bombay Hospital College of Nursing,

Indore.

REVIEW OF RELATED LITERATURE

**Richard** (2010) conducted a study in USA on evaluation of computer-based approach to the

variations in ABG values. The study was conducted over 81 first year Nursing students. One

group was in the pre-test and other half in the post-test. A randomized control method was used

Available online: <a href="https://pen2print.org/index.php/ijr/">https://pen2print.org/index.php/ijr/</a>

Page | 797

Available at <a href="https://pen2print.org/index.php/ijr/">https://pen2print.org/index.php/ijr/</a>

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

in the study. Two different tests labeled; Group A and Group B were constructed for the study. Each test took students approximately 10 min to complete. The pre-test was used to establish a baseline of content knowledge of a range of ABG parameters. Analysis of data were performed using t test, Pearson Correlation and ANOVA. The p value was  $\leq 0.05$ . Thus, the study concluded that ABGA was a subject worthy to be included in a problem-based curriculum that significantly increases the confidence of the students. [25]

Schneiderman et al. (2009) conducted a study in Northern Illinois on the effectiveness of an online, computer based learning module for Arterial Blood Gas analysis. It was done over 58 student Nurses. Pre- test post-test only design was used for the study. Subjects were consented to participate and completed a pre-test measure of their knowledge regarding ABG interpretation. Then they participated in a Computer Based Learning Module on ABG interpretation and completed a post-test. The statistical analysis showed that the student Nurses' knowledge increased significantly after viewing the computer Based Learning Module (p<0.001). This improvement was irrespective of batch. The conclusion of the study was that Computer Based Online Learning could emerge as a means to provide continuing education to student Nurses regarding ABG. [26]

Jose manual haemandez -Padilla (2008) conducted a study in Spain on development and psychometric evaluation of the Arterial Puncture self-efficacy scale. It was done on 342 Nursing students. Convenient sampling method was used to select the Nursing students from various Nursing colleges. The arterial puncture self-efficacy scale (APSES) was developed and psychometrically tested. Reliability and content validity were studied. The entire students were divided into experimental group and control group with 171 students respectively. The experimental group was assessed using arterial puncture self- efficacy scale during each arterial puncture and post-test was done for both the groups by means of a checklist. Cronbach's alpha coefficient was used for the evaluation of the scale. The result obtained showed that there was a

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

significant difference between the groups (p = <0.001). Thus the study concluded that arterial puncture self-efficacy scale is effective during arterial puncture for ABG analysis.

#### RESEARCH METHODOLOGY

For any research work the methodology of investigation is of vital importance. Research methodology is a way to solve problems. It is systematic procedure in which the research starts from initial identification of the problems to final conclusion. Research methodology includes research approach, research design, setting, the population, sample, criteria for sample, method of sample selection, description of tool, testing of the tools, pilot study, procedure for data collection, plan for data analysis. Evaluative approach helps to explain the effect of independent variable on the depended variable. Pre-experimental, two-group pre-test, post test design ( ) was adopted for this study.

Variables under study are

Available at <a href="https://pen2print.org/index.php/ijr/">https://pen2print.org/index.php/ijr/</a>

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

**Dependent variable (DV)** knowledge

**Independent variable (IV)** training programme.

Setting- The study was conducted in Bombay Hospital College of nursing (Indore M.P).

**Population-** The target population in this study was students of Bsc nursing students.

Sample and sample size 40, Sample technique-convenient sampling is done in this study.

Sampling criteria

**Inclusive criteria:-**

Students who all are,

- Bsc nursing students of Bombay Hospital College of nursing Gwalior MP.
- Willing to participate in this study.
- Present at the time of study.

#### **Exclusion criteria**

Students who are,

- Not willing to participate.
- Bsc nursing students of other college.

#### **Description of the tool**

The following instruments tools were developed in order to generate data.

- 1. Demographic data.
- 2. Structured knowledge questionnaire to assess the knowledge of students in relation to ABG analysis.

#### **DATA COLLECTION**

The nursing students who met the criteria were included for the study. Data collection was started after obtaining permission from the college Authority. Written informed consent was obtained from all the nursing students participated in the study. The socio demographic data and knowledge was obtained using structured questionnare. The data was analyzed using descriptive and inferential statistics.

### **RESULTS**

Available at <a href="https://pen2print.org/index.php/ijr/">https://pen2print.org/index.php/ijr/</a>

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

### Distribution of Socio- Demographic Variable:-

The analysis of demographic data of the sample is described in terms of age, religion, area of clinical experience, previous knowledge using frequency and percentage. Pre-test score with selected demographic variable association was analysed using chi-square. Comparison between the pre-test, post-test knowledge score has shown by comparing the mean, median, mode, standard deviation.

# 1. DESCRIPTION OF THE SAMPLE ACCORDING TO THE DEMOGRAPHIC VARIABLES

Table1: - Description of sample according to demographic characteristics N=40

Demographic C	haracteristics	Frequency	Percentage	
	16-17	0	0	
	18-19	13	32.5	
	20-21	27	67.5	
Age (in years)	Above 21	0	0	
	Hindu	1	2.5	
	Muslim	1	2.5	
	Christian	38	95	
Religion	Others	0	0	
	ICU	14	35	
Area of	CCU	11	27.5	
Clinical	Ward	9	22.5	
experience	None of the above	6	15	
	Workshops	4	10	
	Seminars	14	35	
Previous	Conferences	1	2.5	
knowledge	None of the above	21	52.5	

Available at <a href="https://pen2print.org/index.php/ijr/">https://pen2print.org/index.php/ijr/</a>

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

The above table describes the following findings

- ❖ Majority of (67.5%) B.Sc Nursing students were in the age group of 20-21 yrs and 32.5% were in the age group of 18-19 years
- Around (35%) of the B.Sc Nursing students had the experience from ICU, 27.5% from CCU, 22.5% from ward and 15% had no experience from the above-mentioned options.
- ❖ Majority of the B.Sc Nursing students were Christians, 2.5% were Muslims and Hindus respectively.
- ❖ 2.5% of the B.Sc Nursing students mentioned that they gained knowledge through conferences, 10% from workshops, 35% from seminars and 52.5% gained knowledge from none of the above-mentioned options.

# 2. ASSESSMENT OF LEVEL OF KNOWLEDGE OF BOTH THE EXPERIMENTAL AND CONTROL GROUP ON ABG ANALYSIS AND ITS INTERPRETATION BEFORE INTERVENTION

This section deals with the assessment of level of knowledge of both the experimental and control group on ABG analysis and its interpretation. The level of knowledge is divided under following heading - poor, average, good.

TABLE-2: Distribution of level of knowledge of experimental group and control group on ABG analysis and its interpretation N=40

	Pre-test								
	Experimental group Control group								
	F	%	Mean	SD	F	%	Mean	SD	
Scores									

Available at <a href="https://pen2print.org/index.php/ijr/">https://pen2print.org/index.php/ijr/</a>

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

	2				6			
Poor		10				30		
	18	90			14	70		
Average								
Good	0	-	14.10	2.81	0	-	11.85	2.9

During the pretest, in the experimental group, majority [90%] had average knowledge and 10% had poor knowledge; while in the control group, majority [70%] had average knowledge and 30% had poor knowledge.

# 3. ASSESSMENT OF LEVEL OF KNOWLEDGE OF BOTH THE EXPERIMENTAL AND CONTROL GROUP ON ABG ANALYSIS AND ITS INTERPRETATION AFTER INTERVENTION ON EXPERIMENTAL GROUP

Post-test								
Experimental group			Contro	Control group (without intervention)				
F % Mean SD				F	%	Mean	SD	
0	0			6				
					30			
4	20			14	70			
16	80	24.10	3.51	0	-	11.85	2.9	

During the post test, in the experimental group, majority [80%] had good knowledge and 20% had average knowledge; whereas in the control group, majority [70%] had average

Available at <a href="https://pen2print.org/index.php/ijr/">https://pen2print.org/index.php/ijr/</a>

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

knowledge and 30% had poor knowledge which was similar to the pre test score. The mean difference of the experimental group was 10. As the mean increased from 14.10 to 24.10 and standard deviation increased from 2.81 to 3.51 where as in control group mean and standard deviation remained same.

# EFFECTIVENESS OF STRUCTURED TEACHING PROGRAMME ON ABG ANALYSIS AND ITS INTERPRETATION

This section deals with the effectiveness of Structured Teaching Programme on ABG analysis and its interpretation. The level of knowledge of the experimental group during the pretest and post test was compared to prove the effectiveness of Structured Teaching Programme.

TABLE 3-Effectiveness of Structured Teaching Programme on ABG analysis and its interpretation on the experimental group and control group

					Mean	
Group	LEVEL	MEAN	S.D	df	difference	't' VALUE
experimental	Pretest Post test	14.10 24.10	2.808 3.508	19	10	14.293*
Control	Score without intervention	11.85	2.9	19	0	0

 $*P \le 0.05$ 

# Available at <a href="https://pen2print.org/index.php/ijr/">https://pen2print.org/index.php/ijr/</a>

# **International Journal of Research**

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

The mean post-test knowledge level of experimental group (24.10) was higher as compared with the pre-test score (14.7). The calculated t value was 14.293 and was more than the table value, 't' (2.09). The p value of experimental group was less than 0.05. Hence, there was a difference in the knowledge level of B.Sc Nursing students after the administration of Structured Teaching Programme. Hence research hypothesis (H<sub>1</sub>) was accepted.

Comparing the experimental group and control group BSc Nursing students mean, SD, df, mean difference and 't' value H2 hypothesis was accepted. This to results indicated that the Structured Teaching Programme was effective in increasing the knowledge of BSc Nursing students regarding ABG analysis and its interpretation.

#### Implications of the study

- 1. Specialized teaching modalities can be made for the enhancement of knowledge level of the student Nurses.
- 2. Teaching methods like Structured Teaching Programme can increase the level of confidence and skills of the student Nurses in their practical field.
- 3. Skilled practitioners can provide better care by reducing complications
- 4. Senior Nurses can pass on the knowledge gained to the next generation Nurses and thereby, improving their knowledge.
- 5. Findings of this study can be utilized for conducting research on various aspects related to ABG sampling.
- 6. This study can motivate other researchers to conduct similar researches on staff Nurses to assess the level of practice on ABG sampling on a large sample basis.
- 7. This study can encourage other researchers to prepare new strategies for improving the level of knowledge of student Nurses on various complicated procedures.

e-ISSN: 2348-6848 p-ISSN: 2348-795X Volume 05 Issue 21 October 2018

#### Recommendations

- 1. The study can be replicated on larger sample in different setting so that the findings can be generalized to larger population.
- 2. A similar study may be done on staff nurses.
- 3. A comparative study can be conducted to assess the effectiveness of other college nursing students.

#### **Conclusion**

By this study we came to know that there is no association between the demographic variables and there is a significant effectiveness of the training programme on the knowledge of the students of Bsc II and III year regarding ABG analysis.
